MANUFACTURING

Performance Engine Components by Callies

2021

***If you are serious about being in the winner's circle,
then you have to be serious about Callies.***

Callies Performance Products began manufacturing high performance crankshafts in 1989. With many years of engineering and employee experience, we have grown to be the industry leader for innovative product design. This, along with our sister company, Energy Manufacturing, and our partnerships with various suppliers, Callies is truly your one stop shop for performance.

We take pride in staying ahead of the competition with the latest high tech design and manufacturing advantages. Utilizing the latest in computer aided solid modeling and CNC machining centers, Callies offers the best designed, highest quality crankshafts, connecting rods, and camshafts available on the market today.

At the heart of our commitment to excellence is one of the most experienced sales teams in the industry. Up-to-date information on the latest products and innovations is available to Callies customers through our expert sales staff. Information shared between Sales, Engineering and Manufacturing personnel on a daily basis creates company-wide continuity ensuring that Callies maintains a focus on developing performance products that exceeds all of your needs.

ENERGY

MANUFACTURING

Energy Manufacturing, Ltd. was formed in 2009 and is a distinctive expansion of Callies Performance Products and Tecnomia Industries.

ENERGY is focused on precision machining and manufacturing for complex components and assemblies where partners need custom solutions or that have a specialized or demanding routine. This includes applications for the high performance racing market, defense, mining, and oil and gas sectors.

A state-of-the-art manufacturing facility and in-house design team means that ENERGY is suited to scale production to meet a large spectrum of volume and complexity. With billet aluminum engine blocks, intake manifolds, cylinder heads and various other accessories, ENERGY has the recipe for performance.

ULTRA BILLET CRANKSHAFTS

Callies Ultra Billets are intended for use in cutting edge applications where durability and innovation are a must. Ultra billets are produced from low carbon-high nickel steel that receives multiple heat treatments. Our specialty steel and heat treat processing yields a crankshaft with fracture resisting ductility, stiffness and a wear-resistant outer case.

Your Ultra billet can be ordered in many custom configurations. These high alloy crankshafts are intended for severe duty, high output applications.

Ultra Billets Are Manufactured For The Following Engine Families:

- **Small Block Chevy**
4.400", 4.500" and 4.600" Bore Spacing
- **Big Block Chevy**
4.840", 4.900", 5.000", 5.300" Bore Spacing
- **LSx Cleveland Mains, all types, LT1**
- **SB Ford 302 and 351**
- **BB Ford 460**
- **Mopar Hemi - 440**
- **Gen III Hemi**
- **RY45**
- **Nissan GT-R**
- **Duramax**
- **RB30 Hybrid**
- **Noonan**
- **Miner**
- **481X**

Each Ultra billet crankshaft is uniquely machined with our Ultra-Shed counterweight profiles. The Ultra-Shed leading edge profile gently moves oil away from the oncoming counterweight while the directional trailing edge directs oil away from the oncoming rod journal.

Our Aero-Shed super finish will give you a totally stress-riser free and incredibly aero efficient crankshaft. When the Ultra-Shed and Aero-Shed processes are combined, the result is a crankshaft with the lowest coefficient of drag in the industry.

Optional center counterweight shown with Ultra-Shed leading and trailing edge contouring

Rod journal holes and main bearing gun drill bores are all highly polished and radiused.

Top Fuel Hemi with Aero-Shed super finish and splined post

ULTRA DIRT / BOOST CRANKSHAFTS

Ultra Dirt Billet cranks are application specific designed billet cranks made from Callies proprietary TimkenSteel 4330. Specifically designed for circle track applications where the absolute minimum reciprocating weight is demanded without sacrificing strength. Torsional fatigue is mitigated through strength enhancing pin arms. Counterweights are reduced in radial width to reduce weight but at the same time not sacrificing balance characteristics.

Ultra-Boost Series Billet cranks are power adder specifically designed. These are made from Callies proprietary TimkenSteel 4330. Pin arms mimic our industry leading design proven in Top Fuel racing. Extra material is added also to the front and rear arms where loads are targeted and normally cause failures. Torrington bearing provisions are available upon request.

MAGNUM BILLET CRANKSHAFTS

The best features of crankshaft design are incorporated into each **Magnum Billet Crankshaft**. Drawing from years of crankshaft experience, the Callies design team created a lightweight, eight counterweight crankshaft. This design criteria has been followed for each family of shafts found in the Magnum Billet line of products.

To guarantee consistency, every Magnum Billet is produced from high grade American made 4340 steel that is completely heat treated and nitride surface hardened in house at Callies. A wide range of strokes and journal combinations are available. A typical eight counterweight Magnum Billet Small Block Chevy crankshaft will weigh less than 48 pounds.

Special attention given to counterweight placement has resulted in shafts that minimize the need for heavy metal.

Magnum Billets Are Manufactured For The Following Engine Families:

- **Small Block Chevy**
4.400" and 4.500" Bore Spacing
- **Big Block Chevy**
4.840" Bore Spacing
- **BB Ford 460**
- **BB Mopar**
- **DuraMag**

MAGNUM XL / XB CRANKSHAFTS

For nearly 20 years, **Magnum XL crankshafts** have proven to be the most durable, best performing lightweight crankshafts available. Machined from ultra pure SAE 4340 steel, these lightweight crankshafts are capable of handling the high horsepower and RPM of today's most advanced engines.

Magnum XL lightening profiles result in crankshafts having extremely high strength to weight ratios. Material is carefully removed from non-stressed areas of each shaft eliminating parasitic material and weight. The Callies Magnum XL profile is exceptionally effective at minimizing windage within the crankcase atmosphere. Oil control is improved through the elimination of disruptive undercuts, resulting in smooth sided, free flowing counterweights. Each main and rod journal is drilled for weight reduction and throttle response improvement.

Magnum XL crankshafts are shipped fully balanced to your exact assembly weight without drilling. These crankshafts are available in many custom configurations. Your order will be processed specifically to meet your needs.

Our unique Magnum XL lightening profiles were developed to optimize material distribution for enhanced strength, superior bearing load reduction, and consistent balance.

Small Block Chevy Magnum XL profiling close-up

Big Block Chevy, up to 4.500". Subject to stroke/bob weight combinations.

Magnum XL Are Available For The Following Engine Families:

- Small Block Chevy
- Big Block Chevy
- LSx/Gen V LT1
- Small Block Ford 302 and 351

MAGNUM CRANKSHAFTS

After years of service, **Magnum crankshafts** by Callies have established themselves as one of the most durable competition crankshafts ever produced. Magnum crankshafts are manufactured from ultra pure SAE 4340 steel. Callies then subjects this material to multiple heat treatments, resulting in a crankshaft with unsurpassed wear and strength characteristics. All Magnum cranks feature Callies Ultra-Case heat treatment.

Magnum Are Available For The Following Engine Families:

- LSx/Gen V LT1
- Small Block Chevy
- Big Block Chevy
- Small Block Ford 302, 351
- Big Block Ford 460
- Duramax

Each Magnum crank will have gun drilled mains and fully profiled counterweights, regardless of engine type. A typical 4.000" stroke Small Block Chevy will weigh less than 48 pounds. Magnum crankshafts are available for a variety of engine types and can be manufactured to your specific configuration.

Many crankshafts are counterweighted to offset simple balance forces detected at main bearings 1 and 5 by today's precision balancers. Callies Magnum Mass Correct counterweights have been strategically placed to reduce imbalance forces over the entire length of the shaft. The result is a crankshaft exhibiting superior bearing life and minimal wear.

Material distribution over the rod journal arms and critical strength generating regions of Magnum crankshafts has been enhanced as well. These slight design changes improve the strength to weight ratio, ensuring each Magnum crankshaft will have an extended fatigue resistant life.

COMPSTAR COMPONENTS

Compstar components were introduced in 2004 as a product line designed to meet and exceed the requirements of today's racer at a sensible price point. Callies' value driven approach is to design and engineer here in the U.S., then source through long term vendors, supported by our engineers, giving us distinct technical and quality advantages. This coupled with our American craftsmen, that finish the components at our facility in Fostoria, Ohio, create a combination that is considerably more robust and stable than our competitors. We are not just an importer of product, we are a manufacturer that wants to bring products to our customers at all price points.

Our Compstar line also extends to Sport Series, which we have designed for Maximum Effort engines. They feature the best metallurgy and heat treatment on the market today.

Compstar Step by Step:

1. Compstar crankshafts begin their life overseas where they are forged using Callies owned dies. Not generic forging that other manufacturers use. You can be confident that you're getting our product by the triangle shaped notch in one of the counterweights.
2. The 4340 steel forgings are semi-finished, machined off-shore, then shipped to Callies to be finished.
3. All Compstar components are 100% Mag Particle inspected to verify there are no cracks or inclusions in the material. Additionally, our in house metallurgical laboratory verifies material and heat treatment to ensure it meets Callies engineering and quality requirements.
4. 100% of our Compstar crankshafts are finish sized and polished by American craftsmen, ensuring proper fitment and widths. Additional items checked are runout, bolt holes and oil holes.
5. Every crank then goes through our stringent Quality Control final check, guaranteeing your Compstar Engine Component is ready to race.

ULTRA CONNECTING ROD

ULTRA™

Callies has developed the **Ultra connecting rod** with the design goal of an uncompromised strength to weight ratio. Every Ultra connecting rod is produced from specially formulated TimkenSteel 4330 and precision forged for uniform grain flow and consistency. Many geometric nuances are incorporated into the design of Ultra connecting rods, which are subject to high output, high RPM applications. These design features enhance the Ultra against specific loads and stresses.

Ultra connecting rods are fastened by high alloy cap screws produced specifically for severe applications by ARP. Purpose built 260Ksi Ultra Bolts offer improved thread engagement for a smoother, more consistent net clamping load. To eliminate deformation and extrusion only Ampco 45 bronze silica alloy is used within the wrist pin housing bore. This material has a proven hardness more than 26% greater than commonly used Ampco 18 material. For high RPM or extreme horsepower applications, Ultra connecting rods are fitted with MP 3.5 bolts. These Ultra high alloy fasteners provide unparalleled clamping strength and toughness. Upgraded bolts are available for all Ultra I-Beam connecting rod configurations.

ULTRA ENFORCER

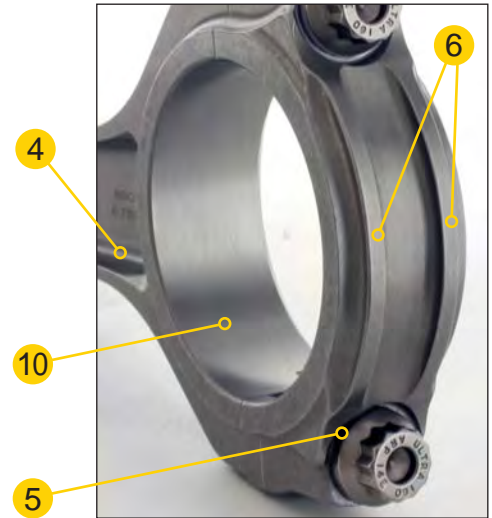

Designed with fortified tower flanges, **Enforcer I-beam** connecting rods are the ideal component for turbocharged and supercharged engines.

The I-beam design has been time tested and proven as the most stable configuration in high torque applications. High combustion forces generated within boosted engines are capable of buckling a standard connecting rod that had been intended for a naturally aspirated application.

ULTRA CONNECTING ROD

Ultra & Ultra Enforcer Connecting Rod Design Features

1. Truncated arc tower flanges improve stiffness and reduce weight.
2. Smooth notch free section at bearing housing shoulder.
3. Pressure Angle Arches disperse wrist pin induced strain.
4. Large web to flange transition radius.
5. Full fillet intersection of bolt spot face and interior gusset surfaces.
6. Stress spreading (twin rib caps) utilize the extended section concept of strength enhancement.
7. Precisely machined (Trapezoidal Contour) at the tower base eliminating parallel flange harmonics and increasing weight reduction.
8. Extended foot print at joint mating faces for superior housing stability.
9. Min/Max gusset; our analyzed design minimizes material yet achieves maximum stiffness.
10. Low carbon, high-alloy Timken specialty steel.

ULTRA ASSASSIN

Ultra Assassin diesel rods are made entirely in the USA. Like all Ultra rods they are made from specially formulated TimkenSteel 4330V. This material is then precision forged in Michigan and machined in our Fostoria, Ohio facility. Assassin Series Rods are near net as forged with minimal machining. They are fastened by high alloy cap screws made specifically for severe duty service by ARP Inc. To eliminate deformation and extrusion only AMS 642 bronze alloy is used within the wrist pin housing bore.

ULTRA CONNECTING ROD

ULTRA

Dirt / Oval Track Rods

Designed for naturally aspirated motors the Ultra Dirt / Oval rods feature a tapered beam. This reduces the overall mass which in turn means a lighter bob weight and quicker throttle response. They also incorporate an enhanced big end where 7/16 bolts are utilized on the Honda rod journal. Thus increasing clamping loads without the added expense required when using the small 3/8 fasteners. The Ultra Dirt / Oval rods are made from the same TimkenSteel 4330 V steel and 265 KSI Ultra bolts as any other rod in the Ultra family. These are also available with the ARP MP3.5 Bolts and .866 Wrist pins.

ULTRA XD

This unique connecting rod design offers greater cam to connecting rod clearance. This innovation will allow the use of increased base circle cams for improved valve train performance, stability, and horsepower. For the first time, engine builders are given greater flexibility in selecting valve train components when using a standard cam height block. The Ultra XD concept has been track tested and proven to be a reliable, long term solution to troublesome connecting rod to camshaft interference problems.

Additional XD Clearance

Unique canted housing bore design provides at least 0.050" of additional cam clearance

Ultra H-Beam connecting rods are High Value American-made engine components. Ultra H-Beams are forged from the same premium 4330 material as our entire Ultra line. Savings resulting from streamlined manufacturing design are passed directly on to you. The Ultra H design ensures the geometry of these critical components will remain true under high tensile and compressive load situations.

ULTRA
(High Value) H-Beam
Connecting Rods

COMPSTAR CONNECTING ROD

Compstar Connecting Rods are given the same attention to detail as our Compstar Crankshafts. Although they begin their journey overseas, they are forged on Callies own dies and are returned to our shop in Fostoria, Ohio to be finished. Every detail of this highly-stressed component has been carefully analyzed to maximize repeatability and dependability.

Compstar rods were designed with higher horsepower stroker motors in mind from the start, not as an afterthought. Bolt upgrades and stroker clearance are normally additional cost options with other rods, but are standard equipment with Compstar rods.

ARP 2000 bolts are used exclusively for superior tensile strength and clamping force at the critical mating joint of the rod and cap. The placement of these bolts is also key to additional rotational clearance in stroker applications at the bottom of the bores and at the pan rails.

Strengthening gussets are also added to the bolt spot-face area of the cap where cross sectional thickness is at a minimum. These gussets not only increase strength, but aid in dimensional stability as well.

Contouring above the bolts increase cam clearance and decrease the amount of clearance required at the bottom of the bores on the cam side.

The increasingly popular Forged Side Relief style pistons move the pin bosses inward, normally requiring narrowing of the pin end of the connecting rod. Compstar rods are designed and manufactured with a .960" pin end width, and will work with all currently available FSR style pistons without modification.

Compstar Rods Step by Step:

1. Compstar and Compstar Sport Series are forged overseas on Callies owned dies. They are not run on the community dies shared by many others.
2. The 4340 steel forgings are semi-machined off-shore and then shipped to Callies to be finished.
3. Metallurgical checks confirm the material and heat treatment complies with our specifications.
4. 100% of the parts are washed, Callies purchased ARP fasteners are installed and torqued, and parts are honed by our American craftsmen to final sizes.
5. Samples from each lot are checked in our Quality Control lab for adherence to our strict specifications, and also checked for bend and twist. Parts are weight matched into sets creating consistency for the engine builder.

CAMSHAFTS / CAM CORES

Callies Performance Products has developed one of the most extensive camshaft machining capabilities in North America. In addition to our comprehensive in house heat treat department we are able to produce and verify any complex contour found on today's camshafts.

Callies fully finished camshafts are machined and heat treated entirely in house. This continuity of manufacturing allows Callies to deliver high quality camshafts on schedule. Our finished cams are ground with the latest Landis CNC technology and ADCOLE inspected for accuracy making them the most consistent cams on the market today. If required, your cams can be finished with inverted flank lobe profiles and complex VVT oil channels and drillings.

Callies Cam Research Lab

Valvetrain durability is a key ingredient to the success of every engine. The Callies Cam Research Lab has been established to guarantee that our cams are capable of extended life cycles in abusive applications. When combined with our metallurgical capabilities, the Callies Cam Research Lab allows evaluation of lobe profiles, valvetrain systems and processing methods like no other cam company. Spintron testing enables our engineering staff to evaluate valvetrain stability in minute detail up to 11,000 RPM. Programmable test cycles allow complete event simulation. Sixteen channel data acquisition can provide monitoring of temperatures, pressures, flows, loads and strain. Let Callies help you design your next step forward.

Micro hardness testing on Leco LM100AT

Spintron test rig with laser tracking system

CAMSHAFTS / CAM CORES

CARBOCORE

PERFORMANCE CAMSHAFT CORES

Carburized & Hardened 8620 and 9310 steel camshaft cores are produced to AMS 2301 (AQ) standards. Our engineering staff can create an unground lobe profile to your exact requirement. Carbocore cams are machined and heat treated entirely in house.

Callies Indurocore camshaft cores can be machined to your specification from either 1050 or 4150 alloy steel. Every Indurocore cam is induction hardened in house at Callies. This process is carefully monitored guaranteeing metallurgical consistency. Indurocore cams are available for a wide range of engines.

TITAN
Tool Steel Camshafts

Callies metallurgy and heat treat teams have perfected a revolutionary process that offers unrivaled camshaft durability. Titan Tool Steel Camshafts give you more options for performance enhancing geometry while increasing life expectancy. Fully finished Titan cams are available for a wide range of engines and applications.

INDUROCORE

PERFORMANCE CAMSHAFT CORES

Engine Families Presently Supported:
(Cores or Finish Ground)

- Ford Powerstroke
- Cummins B series
- LS Std, 55mm, 60 mm
- SBC all bore spacings
- BBC all bore spacings
- Gen III Hemi
- LS1
- Mopar T/F & T/A, 6 bolt
- Pontiac V8
- Holden V8
- Mopar R block
- Dodge Viper
- Duramax
- Ford 351 / 302
- Ford 429 / 460

Jenoptik Opticline inspection machine

Multiple Landis CNC cam grinders

LSx & GEN V LT1

Callies has developed a wide range of part numbers for the continually evolving and popular LS family of engines. You will find our selection of components to be the industry's most comprehensive offering.

Ultra LS cranks can be purchased with or without large fan angle center counterweights

LS Ultra Billet

Available Options:

- Stroke range of 2.720" to 4.600"
- LS1, LS7, LT1 posts are available
- 6, 8, or 9 bolt pattern flange options
- Rod Sizes: 1.850", 1.888", 2.000", 2.100", (2.200" w/sbc width) 2.200"
- Main Journal Sizes: Standard LS, Iron Duke, Ford Cleveland 351
- 8 or 6 counterweight designs available
- Sold complete with no drill balance
- Aero efficient Ultra-Shed counterweight profiling is standard
- Aeroshed super finishing included with all Ultra billets
- All Ultra LS billets are produced from Timken 4330 alloy steel

Contact the Callies sales team for a full list of part numbers and options. 419-435-2711

LS/Gen V LT1 8 Counterweight Magnum

Average weight: 52 lbs.

LS1 Gen III - IV Standard Features

- Stroke range of 2.720" to 4.250"
- Fully counterweighted
- Counterweight prepped for a minimum 1830g bob weight
- Dual linear post keyways
- Average weight 47 lb.
- Gun drilled mains & lightened rods
- Additional post keyways available
- Custom flange bolt and dowel drilling available
- 2.100", 2.000", 1.888", 1.850" rod journal diameters
- LS, LS7, or LT1 posts configurations
- Custom reluctor hub machining or removal
- Chevy 283 and Ford 351 mains available as custom

- 6 Counterweight Magnum also available.
- Contact the Callies sales team for a full list of part numbers and options.

6 Counterweight DragonSlayer

Average weight: 48.5 lbs.

Standard Features

- Average weight 50 lb.
- 6 Counterweight Design
- Limited Stroke Availability: 4.125", 4.100, 4.000", and 3.625"
- LS or LS7 post configurations
- Dual linear post keyways
- Counterweight prepped for an 1830 g bob weight
- Standard LS mains, 2.100" rod journals
- Gun drilled mains and lightened rods

Stroke:	Main:	Pin:	Cammed for Rod Length	Part #:

4.000	2.559	2.100	6.125 LS7 Post	AWO31T-DS

LSx & GEN V LT1

Compstar LSx (6 and 8 Counterweight)

Standard Features

- Typical weight for a 4.000" stroke, 2.100" journal = 51 lbs.
- 2.100" or 2.000" rod journals
- Standard LS main diameters only
- 3.625", 4.000", 4.100", 4.125" strokes available
- All Compstar LS cranks are counterweight prepped to 1825 gram bob weight
- OEM 58 tooth reluctor or billet 24 tooth reluctors available

Reluctors

Single piece billet reluctor wheels machined to OEM specification with either 24x or 58x notch patterns. Callies reluctor wheels for all LS and LT engines are final bored with a .007" undersize bore insuring installation security in the harshest of applications. All surfaces on Callies reluctor wheels are machine milled not laser cut to ensure smooth, strong signal.

McCain Racing "Bowser"

Callies LS Ultra Billet Crankshaft, Callies Finish Ground Camshaft, Energy LS Engine Block

LSx & GEN V LT1

* Pistons, Bearings and Finish Ground Cams also available.

ENERGY MANUFACTURING

Energy Manufacturing offers LS Engine Blocks, Intake Manifolds and Cylinder Heads for LS engines. See pages 30 - 33 for full specs on these items.

Energy products can be purchased by contacting Energy directly or by talking to your Callies sales representative.

BIG BLOCK CHEVY

For over 30 years, Callies crankshafts have been the workhorse of Big Block Chevy engines in the motorsports industry. We are proud of this success and are pleased to offer continued excellence with our line of crankshafts, connecting rods, engine ready camshafts and Energy Manufacturing engine blocks, intake manifolds and cylinder heads.

BBC Ultra Billet

Standard Features:

- Bore spacings available: Standard 4.840", 4.900", 5.000", 5.300"
 - Stroke range of 3.400" to 6.125"
 - Flange options: 7/16" or 1/2" bolt holes available
 - Rod journal diameters available: 1.888", 2.000", 2.100", 2.200", 2.375"
- Hemi
- 8 or 6 counterweight designs available
 - Sold complete with no drill balance
 - Aero efficient Ultra-Shed counterweight profile
 - Aero-shed super finishing is standard
 - Various keyway configurations available
 - All Big Block Chevy Ultra Billet crankshafts are produced from high grade TimkenSteel material.
 - Splined Post (RCD Style) available

Aeroshed finish and Ultra-Shed counterweight profiling

SMALL BLOCK CHEVY

No other brand of aftermarket components has seen the wide range of application and success as the Callies line for Small Block Chevy engines. With years of cross-application experience, no other brand has been able to provide the winning record and history of durability. You will find our line of crankshafts, connecting rods, and camshafts to be comprehensive and capable of handling your needs.

Ultra Billet Small Block Chevy

Available Options

- Types available: Standard 4.400, Spread Bore 4.500
- Stroke range of 2.600" to 4.500"
- BBC post or SBC post, various keyway configurations available
- Flange styles: Star or Full Round
- Rod journal sizes available: 1.850", 1.888", 2.000", 2.100"

* Also available in Ultra Boost and Ultra Dirt

- Main journal sizes available: 283, 350, 400
- 8 or 6 counterweight designs available
- Sold complete with no drill balance
- Aero efficient Ultra-Shed counterweight profiling is standard
- Aershod superfinishing included with all Ultra billets
- All Small Block Chevy Ultra billet crankshafts are produced from TimkenSteel 4330v material

Magnum Billet Small Block Chevy

Available Options

- Stroke range of 2.750" to 4.250"
- 2.100", 2.000", or 1.888" rod journal diameters
- Main journal sizes available: 283, 350, 400
- Average weight 47 lbs.
- 8 counterweight design
- Machined from TimkenSteel 4340

FORD 460

Callies offers high quality domestically produced Ultra, Magnum XL and Magnum crankshafts and connecting rods for the entire line of Ford V8 engines that are targeted for high HP / high torque applications. Callies crankshafts for the Ford 460 are made with 3.018 inch long gear and damper fit post lengths. Our Ford 460 shafts are machined with dual damper keyways for blower applications.

Ultra Billet Ford 460

Available Options & Standard Features

- Stroke range of 3.625" to 5.300"
- Various post keyway configurations available
- Rod journal sizes: 2.100", 2.200"
- Main journal sizes: Ford 460
- 8 or 6 counterweight designs
- Shipped complete with no drill balance included
- Aero efficient Ultra-Shed counterweight profiling is standard
- Aeroshed super finishing included with all Ultra billets
- All Big Block Ford Ultra billet crankshafts are produced from TimkenSteel 4330v alloy steel
- Short damper fit (High Performance Style)

Magnum Billet Ford 460

Average weight: 79 lbs.

Standard Features

- Fully counterweighted (8 counterweight design)
- Machined with BBC post length & diameter
- Stroke range 3.625" to 5.000"
- Gun Drilled mains and lightened rods
- Perma Case deep nitride, 4340 steel
- Dual post keyways

Magnum Billet Ford 460

Magnum Ford 460

Average weight: 78 lbs. for a 4.750" stroke

Standard Features

- Gun drilled mains
- Single 3/16 (Align- Ease) keyway with lead in witness mark with additional 1/4 key-way
- Short damper fit (High Performance Style)
- Heat Treatment = Perma Case Deep Nitride Options
- Full internal balance available

FORD 351 / 302

Ultra Billet Ford 351 / 302

Available Options

- Stroke range of 2.550" to 4.500"
- Various post keyway configurations available
- Rod journal sizes: 1.850", 1.888", 2.000", 2.100", 2.123"
- Main journal sizes: 302, 351
- 8 or 6 counterweight designs
- Shipped complete with no drill balance included
- Aero efficient Ultra-Shed counterweight profiling is standard
- Aero-shed super finishing included with all Ultra Billets
- Produced from TimkenSteel 4330v alloy steel

*** Also available in Ultra Boost**

Magnum XL Ford 351/302

Weight range of 39 lb. to 47 lb.

Available Options

- Stroke range of 2.600" to 4.500"
- Rod journal sizes 1.850", 1.888", 2.000", 2.100", 2.123"
- 351 Cleveland or 302 Ford type main diameters
- Full internal balance to your specific assembly weight (no drilling)
- Uniquely milled counterweight profiles for reduced weight and windage
- All rod journals lightened
- Gun drilled mains

***Only a partial listing of available part numbers listed here.**

FORD COYOTE & FORD MODULAR

Ford Coyote and Ford Modular engines have proven their exceptional capabilities both at the track and on the street. Callies Compstar 4340 Steel Crankshafts were designed to support the additional horsepower and torque being generated in these applications. These cranks are machined with large strength enhancing journal radii like all Compstar crankshafts and come nitrited. All standard OEM driveline, valvetrain and accessory components can still be utilized.

Ford Coyote and Ford Modular

Average weight: 46 lbs.

Standard features

- Machined from 4340 Steel
- All rod journals lightened
- Heat treatment = Nitride Case

RY45 & VIPER V-10

All Ultra RY45 crankshafts are precisely machined for the revolutionary RY45 engine. No detail has been spared in producing the ultimate in strength and durability. RY45 crankshafts feature eight counterweights that are profiled with the unique windage reducing Ultra-Shed profiling. These billet crankshafts are machined from TimkenSteel 4330v steel that has been carefully Ion Nitrided for superior wear and fatigue characteristics.

Ultra Billet RY45

Available Options & Standard Features

- Stroke range = 3.500" to 4.000"
- RY45 Post and Flange
- Available Rod Journal Diameters 1.850", 1.888", 2.000", 2.100"
- Full internal balance and Aeroshed surface treatment included

Contact the Callies sales team for a full list of part numbers and options.

For all-out performance Viper engine builds, your answer for durability is the Compstar billet crankshaft. Produced from 4340 steel that is heat treated multiple times before final nitride, these shafts are tough and wear resistant. Compstar Vipers can be ordered with either 58 or 10 tooth timing configurations. For improved rod journal oiling, these shafts feature straight shot oil holes running directly from mains to rods. Post bolt holes are deep drilled for 3/4 x 16 threads, significantly strengthening the accessory drive damper fit for super charger applications.

Compstar Viper V-10

Standard Features

- 2.100" or 2.123" rod journal diameters
- Standard Viper V-10 main bearings
- 7/16 x 20 flange bolt holes
- Deep hole post drilling, 3/4 x 16 threads

MOPAR / GEN III HEMI

Performance specific and durability enhanced, Callies crankshafts for the Big Block Mopar and Gen III Hemi are ready for anything your racing program can throw at them. With years of Mopar experience Callies has created an unsurpassed crankshaft for your Wedge or Hemi type engine.

Ultra Series for Big Block Mopar Top Fuel, Top Alcohol, Blower Drive

Standard Features

- Machined from EN30B alloy steel
- Rod journal diameters: 2.375" with large .180" fillet radii
- Main journal diameters: 2.750" or 3.000" with large .150" fillet radii
- RCD Splined post: long 2.340" or short 1.420" spline engagement available
- Sold complete with no drill balance included
- Aeroshed super finishing is standard
- Fully counterweighted with large, bearing saver counterweights
- All rod and main journals drilled for lightening
- PSI / RCD Spline Post Hemi Forged Billet also available

Mopar Magnum Billet

Average weight for a 4.500" stroke balanced to 2350g Bob. = 69 lbs.

Available Options & Standard Features

- Center counterweights
- 4340 AQ Steel
- Gun drilled mains
- All Rod Journals Lightened
- Dual Post Keyways
- Stroke availability 4.125" to 4.750"
- 2.200 BB Chevy rod journal dia. & width

MOPAR / GEN III HEMI

Gen III Ultra Billet Hemi

Average weight = 60 lbs.

Standard Features

- Fully (8) Counterweighted design
- Machined from TimkenSteel 4340
- Uniquely machined counterweight profile for reduced weight and windage
- Gun drilled mains
- Full internal balance to your specific assembly weight No Drilling
- All rod journals lightened
- Heat Treatment = Ultra Case Deep Nitride
- Full support pin top for added strength

Compstar Hemi Crankshafts are manufactured from 4340 steel and machined to popular strokes. These shafts will easily increase the power potential of Chrysler 6.4, 6.1, and 5.7 liter engines. Compstar Hemis can be ordered with either 32 or 60-2 reluctor wheels.

Compstar Gen III Modern Hemi

Average weight for 4.050" stroke balanced to 1785g
Bob. = 57 lbs.

Standard Features

- Sold prepred for a 1785g. Bob weight
- Gun drilled mains
- All rod journals lightened
- Dual linear post keyways
- limited stroke availability

PRODUCT

Ultra Billet Duramax

Standard Features

- Stock and custom strokes available
- Reduced width 2.165" rod journals for additional strength
- All rod journals drilled with lightening holes
- Dual damper keyways
- Single long timing gear keyway for secure installation
- Mains gun drilled
- Custom rod journals upon request
- Timing gear available

DuraMag

Stroke:	Main:	Pin:	Cammed for Rod Length	Part #

DuraMag

Standard Features

- Deep DuraCase nitride treatment that is durability and wear enhancing
- Large True Form fillet
- Keyed sheared proof timing gear fit
- Dual Keyed shear proof shout
- Drilled rod journals for reduced inertia and ease of balance
- Standard Duramax diameter but with strength enhancing 2.154 width
- Machined from 4340 hardened steel
- Main bearing oil holes are machined with lead-ins for enhanced cold start oil flow to rod journals
- Will accept OEM post and flange bolts

DuraStar

Standard Features

- Deep DuraCase nitride treatment that is durability and wear enhancing
- Large True Form fillet radii in all journals
- Keyed sheared proof timing gear fit
- Drilled rod journals for reduced inertia and ease of balance
- Stock 3.898" stroke with OEM journal diameters and width
- Machined from 4340 through hardened steel
- Dual keyed damper fit
- Conservatively rated for 800hp @ 800 ft/lb torque
- Main bearing oil holes are machined with lead-ins for enhanced cold start oil flow to rod journals
- Will accept OEM post and flange bolt

Duramax Ultra Billet Crankshaft

NISSAN GT-R

At Callies, design consideration has been given to address the inadequacies of OEM crankshafts for the GT-R engine. Each Callies GT-R crank is carefully monitored, beginning with ultra pure 4330v steel that receives multiple heat treatments through final nitride & polish. Two post lengths - extended and standard - are available for dry and wet sump applications. Callies GT-R crankshafts are machined to accommodate 2.200" Big Block Chevy or Nissan rod journal diameters. These common diameters will allow engine builders easy access to a wide variety of bearing options. Standard main bearing, post and seal diameters are used throughout this crankshaft.

GTR Ultra Billet Crankshaft and Callies Ultra Rods

SPORT SERIES - HONDA

Designed for Maximum Effort engines, all SS (Sport Series) crankshafts are finished with the same care and detail as the entire line of Compstar crankshafts. All SS cranks are sold balanced and ready for assembly. SS crankshafts by Compstar feature the best metallurgy and heat treatment on the market today. Sport Series (SS) connecting rods are available with either ARP 2000 or Custom Age 625 bolts for High Output applications. All Sport Series rods are H-beam design machined from fine grained 4340 steel.

Honda B Series

Average weight 30 lbs.

Standard Features

- B18 Strokes available 87.2, 89, 92, 95 mm
- 8 counterweight design
- 4340 steel certified by Callies in house Metallurgical lab
- Ultra-Case nitriding performed and certified by Callies
- Rod and main journal surface finish refined to 4Ra or less
- All journals ground with strength enhancing Tru-Form radii
- Limited stroke availability
- Aeroshed finishing optional

Honda K Series

Average weight 33 lbs.

Standard Features

- Strokes 90.7, 99.9, 102 & 106 mm
- Fully Counterweighted Design
- 4340 steel certified by Callies in house Metallurgical lab
- Ultra- Cryo treatment performed in house at Callies
- Ultra-Case nitriding performed and certified by Callies
- Rod and main journal surface finish refined to 4Ra or less
- All journals ground with strength enhancing Tru-Form radii
- No Drill internal balance
- Aeroshed finishing optional

Honda F Series

Average weight 37 lbs.

Standard Features

- Strokes available 84 mm
- 8 counterweight design
- 4340 steel certified by Callies in house Metallurgical lab
- Ultra-Case nitriding performed and certified by Callies
- Rod and main journal surface finish refined to 4Ra or less
- All journals ground with strength enhancing Tru-Form radii
- Limited stroke availability
- Aeroshed finishing optional

SPORT SERIES - NISSAN

Callies Sport Series Nissan engines provide a comprehensive offering of components for every application, regardless how rigorous. Our range of material and design will allow you to find Sport Series crankshafts and connecting rods that re ideal for your build. You will find the variety of our components to provide the perfect solution to your needs regardless if you have 2,500 HP or 500 HP.

Nissan SR20

Stroke:	Main:	Pin:	Part #
91mm	54.9mm	45mm	S22007

Nissan SR20

Average weight: 37 lbs

Standard Features

- 91MM Stroke
- Factory Main and Rod Journal sizes
- Fully Counterweighted
- Straight Shot Oiling
- Material Certified by Callies in house Metallurgical Lab
- Ultra Cryo Treatment performed in house at Callies
- Ultra-Case Nitriding performed and certified in house
- All Journal ground with strength enhancing Tru-Form radii
- Rod and Main Journals finished to a 4RA or less
- No Drill Finish Balance
- Aeroshed finishing optional

Nissan RB26

Average weight: 42 lbs

Standard Features

- Available in Standard and Full Counterweight
- 4340 Steel Certified by Callies in house Metallurgical Lab
- Ultra-Cryo treatment performed and certified by Callies
- Ultra-Case nitriding performed and certified by Callies
- All journals ground with strength enhancing Tru-Form radii
- Rod and main journal surface finish is refined to 4Ra or less
- Tear drop oil hole lead-ins

SPORT SERIES - TOYOTA

Machined as an enhancement to the formidable Toyota 2JZ engine, Compstar Sport Series crankshafts are your best choice for extreme durability. Beginning with high grade 4340 steel and finished with the proven Callies premium in house nitride treatment these crankshafts are start to finish the best available in today's market. Available in three strokes, all 2JZ shafts are machined to accommodate standard rod and main journal sizes.

Toyota 2JZ

Average weight 47.5 lbs

Standard Features

- Material certified by Callies in house Metallurgical Lab
- Ultra Cryo Treatment performed in house at Callies
- Ultra-Case nitriding performed and certified in house
- All journal diameters are held to .0005 tolerance
- Tear Drop Lead ins on Main oiling holes
- Scalloped Counterweights for weight reduction
- No Drill Finish Balance optional
- Aeroshed finishing optional
- 2JZ Oil Pump Post Spline Gear also available

SPORT SERIES - FORD ECOBOOST

Callies Sport Series components for the Ford Duratec / EcoBoost engine system have been designed with seamless integration in mind. Callies has meticulously examined prints and products to insure Sport Series components are compatible and easily installed into your next project. Every component has been designed or modified to offer specific performance advantages. Callies offers 1.6 L, 2.3 L lightweight and heavy weight and 3.5L EcoBoost crankshafts.

Ford 1.6 L EcoBoost

Average Weight 27 lbs

Standard Features

- Stroke available 81.4 mm
- Fully Counterweighted Design
- 4340 Steel Certified by Callies in house Metallurgical Lab
- Ultra-Cryo treatment performed in house at Callies
- Ultra-Case Nitriding performed and Certified by Callies
- All journals ground with strength enhancing Tru-Form radii
- Rod & main journals finished to 4Ra or less
- Gun Drilled Mains
- Lightened Rod Journals
- Tear drop lead in main oil holes
- No Drill Internal Balance Included
- Aeroshed finishing optional

91.40mm	48mm	44mm	S24008

Ford 2.3 L EcoBoost - Lightweight Factory Modified with a weight reduction of over 9 lbs

Standard Features

- Guaranteed weight under 34 lbs
- All 4 rod journals are drilled for reduced inertia
- Internal balance shaft drive gear removed
- Ultra-Cryo Treatment performed in house at Callies
- Keyway in post either 3/16" or 3mm can be specified
- Shipped fully balanced (build ready)

Ford 2.3 L EcoBoost - Heavyweight Factory Modified

Standard Features

- Guaranteed weight under 40 lbs
- Internal balance shaft drive gear removed
- Ultra-Cryo Treatment performed in house at Callies
- Keyway in post either 3/16" or 3mm can be specified
- Shipped fully balanced (build ready)

ENERGY

MANUFACTURING

Ready to take your program to the next level? Here's why a billet block is the best choice.

Strength

Operating over 2000HP on a cast block greatly reduces the length of serviceability. Energy Manufacturing's billet block is not only an insurance for longevity but a guarantee to contain whatever additional power requirements you may necessitate.

Custom Ability

Cast blocks are constrained by the raw material available coming from the foundry, limiting head bolt and lifter position adjustments. Our billet allows for adjustments while minimizing the risk of reducing structural integrity.

Weight Reduction

Compared to a comparable cast iron block, a billet aluminum block will average approximately 60% weight reduction allotting for you to be closer to class weight minimums and/or put the weight where you want it for proper transfer.

Economical

A billet block is an investment because of the ability to repair the block multiple times and maintain the same structural integrity. Where a cast block may need to be retired, a billet block can be resold at a less depreciated value than it's cast counterpart. Remaining serviceable 3-5 times longer and maintaining resale value will allow for you to invest in other areas of your program even with the higher initial cost.

For builders selecting from our inventory components, Energy Manufacturing will be available to service your program in as little as 30 days. If you do not see the product you are looking for in the following pages, please give us a call 419-355-9304.

GEN II HEMI & WEDGE ENGINE BLOCKS

It's back! Without steady and reliable access to a **Gen II cast iron Hemi** in over a decade car enthusiasts and sportsman racer's have been left to scour scrapyards, market places, and garages to create a workable and affordable solution. Our new licensing deal with FCA group will allow you to tap into this legendary platform on demand at an affordable price.

HEMI®

Gen II Cast Iron Hemi Standard Features

- Configurations Available for Order:
 - Hemi with 4.250" Finish Bore
 - Hemi with 4.500" Finish Bore
 - Hemi with 4.245" Semi Finish Bore
 - Hemi with 4.245" Semi Finish Bore, No lifter bores or pushrod clearance
 - Wedge with 4.500" Finish Bore
 - Wedge with 4.310" Semi Finish Bore
- Deck Height(s): Standard Deck: 10.725", Deck Thickness: .600"
- Camshaft: Cam Height: Standard 5.150"
- Camshaft: Housing Bore: Standard Stepped Cam Tunnel, Max Cam Housing Bore: 60mm Roller Bearing
- Cylinder Bore: Max Cylinder Bore Diameter: 4.600"
- Lifter: Lifter Diameter: .905", Lifter Angle: 45 degrees
- Main Cap Fastening: #1-4 Main Cap: (2) 1/2" Vertical Bolts, (2) 3/8" Side Bolts, #5 Main Cap: (2) 1/2" Vertical Bolts

Included with Block: Block Plug Kit, Camshaft Bearings (Loose), 0.040" Oil Gallery Restrictors (Installed), Rear Oil Seal with Fasteners.

* For available rotating assembly components see page 30 - 31.

Orders for the Gen II Cast Iron Hemi Block can be placed by calling Callies Performance Products at 419-435-2711

BILLET ALUMINUM ENGINE BLOCKS

LS Standard Features

- Deck Height(s): 9.750"
- Cylinder Bore Spacing(s): Standard
- Cylinder Bore Sizes: 4.120"-4.165", customer specified
- Cylinder Sleeve Protrusion: 0 to +.008", customer specified
- Cylinder Head Fastening per Deck: (10) 1/2-13, (4) M8x1.25, (4) 3/8" shoe kit provisions. Standard Pattern.
- Cam Height(s): Raised 0.388"
- Cam Bore Sizes: 55mm Babbitt, 55mm Roller/60mm Babbitt, or 60mm Roller. Delivered finish honed.
- Lifter Bore Configuration(s): Standard
- Lifter Bore Size(s) & Style(s): .937 bushed keyway, .937 bushed standard, or 1.060 in Aluminum ready for bushing. Delivered finish honed.
- Crank Bore(s): Standard LS. Delivered finish honed.
- Main Cap Material(s): Billet Steel
- Main Cap Fastening: (4) 1/2" Vertical Studs, (2) 7/16" side bolts, (2) 1/4" Locating dowels
- Stroke Clearance: 4.625" Max
- Timing Drive(s): Jesel Belt Drive, RCD Gear Drive, or Innovator's West Belt Drive.

LS block shown with 9.750" deck and plus .388" raised cam

Additional Information: Priority Main Oiling, Dry Only, Custom lifter and head bolt patterns available upon request.

Certain options are only available in some configurations. Please call to verify the combination you require is available

BBC Standard Features:

- Deck Height(s): 9.800", 10.200", or 10.600".
- Cylinder Bore Spacing(s): Standard
- Cylinder Bore Sizes: 4.500"-4.600", customer specified
- Cylinder Sleeve Protrusion: 0 to +.008", customer specified
- Cylinder Head Fastening per Deck: (16) 7/16-14 studs & (2) 7/16 Bolt clearance holes. Standard pattern.
- Cam Height(s): Raised 0.400" and Raised 0.600"
- Cam Bore Sizes: 55mm Babbitt, 55mm Roller/60mm Babbitt, or 60mm Roller. Delivered finish honed.
- Lifter Bore Configuration(s): Standard
- Lifter Bore Style(s) & Size(s): .937 bushed keyway, .937 bushed standard, or 1.060 in Aluminum ready for bushing. Delivered finish honed.
- Crank Bore(s): Standard BBC. Delivered finish honed.
- Main Cap Material(s): Billet Aluminum
- Main Cap Fastening: (2) 9/16" Doweled Vertical Studs, (2) 1/2" splayed studs
- Stroke Clearance: Raised 0.400: 4.750" Max, Raised 0.600: 5.250" Max
- Timing Drive(s): Jesel Belt Drive or RCD Gear Drive.

Additional Information: Priority Main Oiling, Custom Rear Cam Plug, Wide DRCE Oil Pan Pattern, Dry Only, Custom lifter and head bolt patterns available upon request.

Certain options are only available in some configurations. Please call to verify the combination you require is available

BILLET ALUMINUM ENGINE BLOCKS

SBF Standard Features:

- Deck Height(s): 9.500", 9.800", 10.000", or 10.200".
- Cylinder Bore Spacing(s): Standard
- Cylinder Bore Sizes: 4.110"-4.150", customer specified
- Cylinder Sleeve Protrusion: 0 to +.008", customer specified
- Cylinder Head Fastening per Deck: 9.800-10.200 Deck: (10) 1/2-13 studs & (4) 3/8-16 studs. Standard Pattern. Optional additional (4) 3/8-16 SC-1 inner bolt holes or (4) Energy splayed inner bolts. 9.500 Deck: (10) 1/2-13 studs, (4) 3/8 Bolt tab provision, & (4) 3/8-16 studs
- Cam Height(s): 9.500 Deck: Standard, 9.800-10.200: Raised 1.273".
- Cam Bore Sizes: 55mm Babbitt, 55mm Roller/60mm Babbitt, or 60mm Roller. Delivered finish honed.
- Lifter Bore Configuration(s): 9.500 Deck: Standard. 9.800 10.200" Decks: Custom, Cam cores in stock.
- Lifter Bore Style(s) & Size(s): Lifter Bore Style(s) & Size(s): 9.800-10.200 Deck: .937 Keyway lifter bushings, 9.500 Deck: .937 Standard lifter bushings or .937 Keyway lifter bushings
- Crank Bore(s): 351 Cleveland. Delivered finish honed.
- Main Cap Material(s): Billet Aluminum.
- Main Cap Fastening: Raised Cam Height Blocks: (2) 9/16" Doweled Vertical Studs, (2) 1/2" splayed studs. Standard Cam Height Blocks: 1 & 5 caps-(2)1/2" Vertical, (2) 3/8" Vertical 2-4 caps-(2) 1/2" Vertical, (2) 7/16" Splayed
- Stroke Clearance: 9.500" Deck: 4.250" Max, 9.800-10.200" Deck: 4.750" Max
- Supported Timing Drive(s): 9.500" Deck: Jesel Belt Drive, 9.800-10.200" Deck Jesel Belt Drive, RCD Gear Drive, or Innovator's West Belt Drive.

Additional Information: Priority Main Oiling, Wet or dry external pump only, Custom Rear Cam Plug, Raised Cam Height Blocks: Chevy Bell Housing, Enclosed Cam Tunnel, & Custom Oil Pan Pattern. Custom lifter and head bolt patterns available upon request.

***Certain options are only available in some configurations. Please call to verify the combination you require is available*
*If you want something you do not see available call to verify, we may still be able to help***

Energy Manufacturing Intake Manifolds support Energy cylinder heads. Should you want a manifold to support your current cylinder head configuration please contact us to determine if we will be able to accommodate.

Intake Manifolds

Platforms & Deck Heights

LS: 9.24 and 9.75. In Stock.

Big Block Chevy: 9.80 and 10.20. In Stock.

Small Block Ford: 9.50, 9.80, 10.00, and 10.20. In Stock.

- Throttle Bodies: Large Front Entry Oval 123mm, Single or Dual Tunnel Ram 4500 Style with or without auxiliary injectors. In Stock.
- Front Entry Manifold Fuel Rails: -8 single injector, -8 dual injector, -12 single injector, or -12 dual injector. In Stock
- Front Entry Manifold Adapters: Single 4", Single 5", Dual 3", Dual 3.5", and Dual 4". In Stock.

Additional Information: Raw Billet Aluminum or Black Anodized Finish.

BILLET ALUMINUM CYLINDER HEADS

Energy Manufacturing Cylinder Heads are machined from 6061 T6 Aluminum. They are ideal for your Boosted, Nitrous and all out competition engines with record setting performances in X275 and Outlaw radial competition.

LS 8° Billet cylinder heads

Standard Features

- Available for wet or dry applications
- Chamber Volume 43cc
- Intake Runner Volume 357cc
- Flow Numbers : Intake 449 cfm, Exhaust 284 cfm
- Intake Valve Size & Angle 2.275", 8° Canted 4°, Titanium Valves in Stock
- Exhaust Valve Size & Angle: 1.625", 0.4° Canted 2.5°, Titanium & Inconel Valves in Stock
- Seat Angle: 50°
- Head Bolt Pattern: Standard

Rockers: Aluminum Intake, Aluminum Exhaust, Steel Intake, Steel Exhaust. In Stock.

Rocker Stand: Energy Custom Stands. In Stock.

Valve Covers: Raw Aluminum or Black Anodized, Billet Aluminum, Left Blank for Custom Engraving, and O-ringed. In Stock.

Additional Information: O-ringed intake flanges, Machined for optional head saver washer inserts, 11/32" guides: bronze intake, steel exhaust, optional flame hoops.

Big Block Chevy 14.5° Billet cylinder heads

Standard Features

- Available in wet or dry configuration
- Chamber volume 84cc
- Intake Runner Volume: 410cc
- Flow Numbers : Intake 550 cfm, Exhaust 356 cfm
- Intake Valve Size & Angle: 2.480", 14.5° Canted 4°, Titanium Valves in Stock
- Exhaust Valve Size & Angle: 1.920", 6° Canted 4°, Titanium & Inconel Valves in Stock
- Seat Angle: 50°
- Head Bolt Pattern: Standard (18) BBC head bolt pattern

Rockers: Aluminum Intake, Aluminum Exhaust, Steel Intake, Steel Exhaust. In Stock.

Rocker Stand: Energy Custom Stands. In Stock.

Valve Covers: Raw Aluminum or Black Anodized, Billet Aluminum, Left Blank for Custom Engraving, and O-ringed. In Stock.

Additional Information: O-ringed intake flanges, Machined for optional head saver washer inserts, 11/32" guides: bronze intake, steel exhaust, optional flame hoops

Ford 10.5° Billet cylinder heads

Standard Features

- Available for wet or dry applications
- Chamber volume 43cc
- Intake Runner Volume 330cc
- Flow Numbers : Intake 454 cfm, Exhaust 279 cfm
- Intake Valve Size & Angle: 2.275", 10.5° Canted 2.5°, Titanium Valves in Stock
- Exhaust Valve Size & Angle: 1.625", 3° Canted 5°, Titanium & Inconel Valves in Stock
- Seat Angle: 50°
- Head Bolt Pattern: Standard with Energy or SC-1 Valley Bolt option.

Rockers: Aluminum Intake, Aluminum Exhaust, Steel Intake, Steel Exhaust. In Stock.

Rocker Stand: Energy Custom Stands. In Stock.

Valve Covers: Raw Aluminum or Black Anodized, Billet Aluminum, Left Blank for Custom Engraving, and O-ringed. In Stock.

Additional Information: O-ringed intake flanges, Machined for optional head saver washer inserts, 11/32" guides: bronze intake, steel exhaust, optional flame hoops.

HEAVY METAL

Callies tungsten heavy metal is machined to ease installation and produce an excellent appearing project. Our heavy metal slugs are centerless ground then precision turned and chamfered to length. The result is unmatched dimensional consistency.

A wide range of lengths are available to specifically match the variety of counterweight thickness' found on Chevy, Ford and Mopar crankshafts. Diameters from .500" up to 1.375" make locating mass exactly where it's needed much easier. High density 97% tungsten material guarantees each piece of heavy metal will yield the maximum effect.

Callies also offers precision drills and reamers, ensuring a perfect interference fit for your heavy metal installation.

Many additional custom diameters and lengths are available, we may have exactly what you need!

Callies can simplify your engine builds by providing a comprehensive offering of the highest quality engine components available. We are experts at consolidating builds into a single shipment that will arrive at your shop on time, ready for installation. **Below is a partial listing of the world class manufacturers we handle.** Let us assist you with expert advice, the latest advancements in technology and additional savings.
