

NITROUS OUTLET

HIGH PERFORMANCE NITROUS SYSTEMS | COMPONENTS | ACCESSORIES

About Nitrous Outlet and the Best Nitrous Products in the Industry!

After years in the aftermarket performance industry as a part retailer and install shop Nitro Dave's LLC launched Nitrous Outlet in early 2001 with the intent of providing customers with the highest quality nitrous systems and technical support in the world. Since 2001 Nitrous Outlet has continued to lead the industry by hiring a well trained knowledgeable staff and by using race proven parts in all systems and accessories. In 2005 Nitrous Outlet launched its own brand of nitrous systems and accessories.

Nitrous Outlet believes that each vehicle is unique and the nitrous system should be built to fit the specifications of each vehicle. We encourage our customers to speak with one of our representatives before making a purchase to ensure they are fully educated on the specifications of the prospective system. Our technical support does not end after the sale. Our support staff is dedicated to educating customers on proper installation and tuning methods for every part in our inventory. Nitrous Outlet prides itself of building strong customer relationships and is always interested in seeing our customers push their vehicles to the next level.

With our knowledgeable tech staff and large product line we are the #1 name in nitrous.

Thank you for supporting Nitrous Outlet!

TECH

FORMULAS & RATIOS

Nitrous to Fuel Ratios

A Nitrous to Fuel ratio is the comparison of how much nitrous to how much fuel. Nitrous to Fuel ratios are used to determine the starting points of the tune up process. Nitrous to Fuel ratios will change between different nitrous systems and applications.

Note: N/F ratios are comparing lbs. For example 7:1 = 7 lbs of Nitrous to 1 lb of Fuel

Note: The larger the N/F ratio spread, the leaner the tune up will be. The N/F ratio will differ between different styles of nitrous systems according to the efficiency of fuel delivery to the combustion chamber. For example we suggest starting the tuning process on a dry EFI nitrous application at 12:1 due to the fuel being added through the injector straight into the combustion chamber. As a result there is no fuel loss due to wall saturation into the plenum.

Nitrous Outlet uses the following N/F ratios for the starting point on a tune up process.

7:1- On Wet Direct Ports Systems. 8:1- On Wet Plate systems. 12:1- On Dry Plate and Direct Port Systems.

Formula for Converting Weight Into PPH

Step one: Choose a set flow time interval of either 5 seconds or 10 seconds.

Step two: Take the beginning weight, subtract the ending weight to achieve lbs flowed in X seconds.

Note: There are 60 seconds in a minute and 60 minutes in an hour.

Take the lbs flowed in seconds and multiply it by the number it requires to add up to a minute. Then take that number and multiply it by 60 to calculate PPH.

5 second flow interval
5 seconds will go into a minute 12 times
lbs flowed in 5 seconds X 12 X 60 = PPH

10 second flow interval
10 seconds will go into a minute 6 times
lbs flowed in 10 seconds X 6 X 60 = PPH

Formula for Converting PPH to HP

HP Based off PPH
PPH divide by 3.6 to get HP.
1756.8 PPH / 3.6 = 488 HPHP

Based off 5 second flow interval
5 second flow # and multiply by 2
2.44 X 2 = 4.88 Remove decimal = 488 HP

HP Based off 10 second flow interval
Take 10 second Flow # and remove decimal
4.88 remove Decimal = 488 HP

Formula for Converting Volume to PPH

Step 1: Convert volume to weight.
Step 2: Convert weight to PPH.

Converting ML to PPH
Note: CC measures the same as ML
Note: There is 1,000 ML in one liter

*1 Liter = .2642 Gallons
*1 Gallon of fuel weighs approximately 8lbs/gal depending on specific gravity.
(Check specific gravity of fuel and adjust)
* Water weighs roughly 8.34lb/gal

Note: When measuring specific gravity you are measuring the weight per volume of fuel. Temperature and chemistry of the fuel can change the specific gravity.

Note: The specific gravity of C16 is 0.735 @ 60°
* 0.735 X 8.34 = 6.1299 Pounds per gallon
* # of Lbs in 10 sec. X 6 X 60 = PPH

Example: If it flows 240 ML in 10 Seconds
240ml / 1000 = .240 L.
240L X .2642 = .0634 Gal.
0634 X 6.1299 = .3886
.3886 X 6 X 60 = 139.896 PPH

Formula for Calculating Fuel

Note: All calculated formulas below are based off achieving a 12:1 N/F ratio
Fuel PPH Needed Based Off Nitrous PPH Flowed
Nitrous PPH / Ratio = Fuel PPH Needed
1756.8 / 12 = 146.4 PPH (12:1 Ratio)

Fuel lbs Needed In 5 seconds Based Off 5 Second Nitrous Flow Interval
lbs of nitrous in 5 seconds divide N/F ratio = Fuel lbs needed in 5 seconds
2.44 lbs / 12 = .203 lbs

Fuel PPH Calculated Off A 5 Second Fuel Flow Interval
Note: There are 60 seconds in a minute and 60 minutes in an hour.
Take the lbs flowed in seconds and multiply it by the number it requires to add up to a minute. Then take that number and multiply it by 60 to calculate PPH. lbs of fuel in 5 seconds
.203 x 12 x 60 = 146.4 PPH

Fuel lbs Needed In 10 Seconds Based Off 10 Second Nitrous Flow Interval
lbs of nitrous in 10 seconds divide N/F ratio = Fuel lbs needed in 10 seconds
4.88 lbs / 12 = .407 lbs

Fuel PPH Calculated Off A 10 Second Fuel Flow Interval
Note: There are 60 seconds in a minute and 60 minutes in an hour.
Take the lbs flowed in seconds and multiply it by the number it requires to add up to a minute. Then take that number and multiply it by 60 to calculate PPH.
lbs of fuel in 5 seconds. 407 x 6 x 60 = 146.4 PPH

NITROUS OUTLET

WinMax Dual Channel Window Switch

MAXIMUM
CONTROL

WINMAX

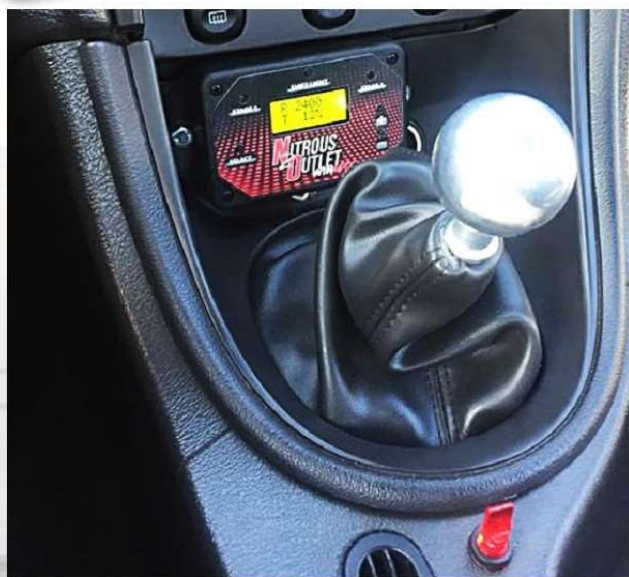

Nitrous Outlet WinMax Dual Channel Window Switch

(Built-in TPS Activation and Gear Lockout Feature)

Introducing the WinMax! We are excited to release the WinMax, our new dual channel window switch for nitrous activation. The WinMax is an extremely user friendly device that is easy to read and program. The detailed instructions will walk you through all of the options such as, RPM, TPS, gear lockout, shift light and single or dual stage configuration. This device incorporates everything you love about Nitrous Outlet products and is made in the U.S.A.

Performance Features and Benefits:

- Perfect for A Drive-By-Wire Vehicle
- 2 Timing Retard Outputs
- Multiple Gear Lockouts
- Built-In Bright LED Shift Light
- TPS Activation & Deactivation
- Works with a Wide Open Throttle Switch
- Stage 1 and 2 Activation LED Indicator
- Works with any 4-Cycle Engine with 1 To 12 Cylinders
- Easy to Read Display
- Live RPM and TPS Display
- Single or Dual Stage Control
- Bright Backlit LCD Display
- RPM Activation & Deactivation
- User Friendly Unit
- Very Small and Compact

ProMax Progressive Controller

NITROUS OUTLET

MAXIMUM CONTROL

PROMAX

Nitrous Outlet ProMax Progressive Controller...

The Nitrous Outlet ProMax is the most advanced progressive nitrous controller on the market! Built in 70amp solenoid drivers control 2 independent stages, or a single stage with closed loop fuel adjustment based on wideband input. Ability to datalog, internal storage for up to 5 different progressive tunes, setup via PC or optional display, 2 ignition retard outputs, adjustable frequency output, multi-gear lockout function, resume and re-start feature, and so much more.

Performance Features and Benefits:

- Inputs for Vehicle Speed, Trans Brake, MAP Densor, Two Wide Band O2 sensors, Two Nitrous Pressure Sensors, and one Fuel Pressure Sensor.
- Two built in 70 Amp Solenoid drivers can control 2 stages independently, or can be configured for closed loop fuel control based on Wideband O2 input with nitrous on one output and fuel on the second output.
- Progressive stage controls allows: Adjustable frequency output of 10-30 Hz (by 1 Hz) for driving solenoids -Ability to be configured to vary solenoid duty cycle as a function of time, throttle percent (TPS), Engine RPM, Vehicle Speed, Manifold Pressure (MAP) - Ability to set response of stage based on secondary arm switch input (Arm, Disarm) - Resume and restart feature option for the controller to resume an interrupted time based ramp or start over based on TPS going out of range.
- Built-in RPM Window Switch with gear lockout feature.
- TPS or WOT switch activation
- Datalogging Capable
- Updateable Firmware
- CAN Bus Output
- Two Ignition Retard Outputs
- Simple USB connection to PC/laptop
- Optional 4.3" touch screen display allows viewing real-time data
- Controller can be programmed via PC/laptop or optional display. Saved datalogs can only be viewed on PC/laptop
- Can save up to 5 different ramps

Controller Only - 00-61002

Screen Only - 00-61003

Controller/Screen - 00-61002-P1

Controller/Screen - Sensors - 00-61002-P2

Nitrous Pressure Sensor - 00-61002-NPS

Fuel Pressure Sensor - 00-61002-FPS

NITROUS OUTLET

Pro-Wiring Harnesses

Nitrous Outlet Pro-Wiring Harnesses... Cut Your Install Time in Half!!!

Cut your install time in half with the Nitrous Outlet Pro-Wiring Harness! These harnesses were designed to eliminate the problems associated with nitrous installs. With the electronics and accessories available in today's nitrous systems, wiring can quickly become an intimidating and extremely time consuming job. This harness is user friendly, and can be used by beginners and pros alike. The end result is a professional prebuilt harness that will simplify any nitrous install saving you time and money.

Standard Harness Specs

All harnesses are prebuilt with pre-terminated Deutsch connectors for a bottle heater, nitrous pressure transducer, purge system, remote bottle opener, TPS input, RPM input, Nitrous Outlet switch panel, dedicated fuel systems, and select dual stage progressive controllers. Harnesses are available for all vehicle types.

Expandability

Each harness comes pre-wired for 2-stages, a single opener, single heater, dedicated, purge, and either WinMax or Promax controllers. We can add on dual heaters and dual openers for an additional charge. Visit www.nitrousoutlet.com for more information or contact a Nitrous Outlet Tech Specialist at 254-848-4300!

Wet Universal Systems

SINGLE NOZZLE WET UNIVERSAL SYSTEMS

The single nozzle system is a popular choice for racers due to the inexpensive cost and the effectiveness of this system. It's really simple to install and includes everything needed to add up to 200HP. All hardware, wiring, 35-200HP jetting, nozzle, solenoids, and hoses. This system includes a wide open throttle (WOT) switch that only allows the system to be activated when the motor is at full throttle. This safety feature will help in preventing engine damage and lean spikes.

- 00-10040-10 Universal EFI Single Nozzle System
- 00-10042-10 Universal EFI Dual Nozzle System
- 00-10043-10 Dual Stage Universal EFI Single Nozzle System

*All systems available with a 10,12, 15 lb bottle or without a bottle. Replace -10 with -00 for no bottle, -15 for 15lb bottle or -12 for 12lb bottle. (ex. 00-XXXXX-15)

NITROUS OUTLET

Camaro Systems

LATE MODEL CAMARO SYSTEMS

Systems come out of the box with everything you need to spray up to 400HP with additional jetting.

Superior Atomization. This injection plate has 6 specially designed nitrous and fuel discharge ports that completely saturate the air intake charge with the best atomized mixture possible. For higher horsepower levels proper distribution into the air stream is critical for even cylinder to cylinder distribution.

Vehicle Specific. The Nitrous Outlet Vehicle Specific Nitrous system is the safest, best fitting, and most tuner friendly system available. This system is designed specifically for the 2016 Camaro with the MSD Atomic Airforce Intake including vehicle specific solenoid brackets, pre-bent hardlines, gaskets, and application specific hardware for the best fitment and cleanest install on the market.

Complete System. System includes all of the necessary components; billet aluminum nitrous plate, 50-100-150-200 HP jetting, hardware, and wiring to properly install a wet nitrous system on your vehicle.

Wide Open Throttle Activation. This system includes a wide open throttle (WOT) switch that only allows the system to be activated when the motor is at full throttle. This safety feature will help prevent engine damage and lean spikes.

Cadillac CTS-V Nitrous Plate Systems

The Nitrous Outlet Vehicle Specific Nitrous system is the safest, best fitting, and most tuner friendly system available for Cadillac CTS-V. This system is designed specifically for the CTS-V platform, including vehicle specific solenoid brackets, pre-bent hard line, and application specific hardware so that you will not have to order special fittings or different length hoses for a custom looking install. In return you get the best fitment and cleanest install on the market.

NITROUS OUTLET

GM Trucks Systems

LATE MODEL GM TRUCKS SYSTEMS

Nitrous Outlet truck specific nitrous systems are the safest, best fitting, and most tuner friendly systems available. These systems are designed to specifically fit the GM Truck with a 78mm or 90mm throttle body. These systems are available in either soft-line or vehicle specific hard-line. Both LSX truck systems are capable of flowing up to 400 HP of nitrous. Each billet plate has a black anodized finish with CNC engraved logo and fuel/nitrous labels.

NITROUS OUTLET

GM LSX Systems

LATE MODEL GM LSX SYSTEMS

The LSX plate systems have specially designed nitrous and fuel discharge ports that completely saturate the air intake charge with the best atomized mixture possible. For higher horsepower levels proper distribution into the air stream is critical for even cylinder to cylinder distribution. Available in single and dual stage applications.

LATE MODEL MSD ATOMIC SYSTEMS

This system has custom designed solenoid brackets and stainless steel hard-lines that will work with any vehicle using a MSD Atomic Airforce intake manifold. This system comes out of the box with everything you need to spray 200HP, but can spray up to 400HP with additional jetting. This injection plate has 6 specially designed nitrous and fuel discharge ports that completely saturate the air intake charge with the best atomized mixture possible. For higher horsepower levels proper distribution into the air stream is critical for even cylinder to cylinder distribution.
